*FUNCTION: La protein plays a role in the transcription of RNA PUNCTION: La protein plays a role in the transcription termination polymerase III. It is most probably a transcription termination factor. Binds to the 3' termini of virtually all nascent polymerase III transcripts (By similarity).

SUBCELLULAR LOCATION: Nuclear (Probable).

DEVELOPMENTAL STAGE: Barely detectable in stage I/II occytes, accumulate in stage III/IV occytes, then exhibit a roughly accumulate in stage III/IV nascent plays and early
                                    PTM: Phosphorylated (Probable).
MISCELLANEOUS: There are two forms of La, LaA and LaB, in :
SIMILARITY: HIGH, TO MAMMALIAN LA PROTEIN.
SIMILARITY: Contains 1 RNA recognition motif (RRM) domain.

SIMILARITY: Contains 1 RNA recognition motif (RRM) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 FUNCTION: La protein plays a role in the transcription of RNA polymerase III. It is most probably a transcription termination factor. Binds to the 3' termini of virtually all nascent polymerase III transcripts. It is associated with precursor forms of RNA polymerase III transcripts including tRNA and 4.5S, 5S, 7S,

FUNCTION: La protein plays a role in the transcription of RNA
polymerase III. It is most probably a transcription termination
factor. Binds to the 3' termini of virtually all nascent
polymerase III transcripts. It is associated with precursor form
of RNA polymerase III transcripts including tRNA and 4.55, 55, 7

DISEASE: Sera from patients with systemic lupus erythematosus often contain antibodies that react with the normal cellular La protein as if this antigen was foreign.

SIMILARITY: Contains 1 RNA recognition motif (RRM) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            FUNCTION: La protein plays a role in the transcription of RNA polymerase III. It is most probably a transcription termination factor. Binds to the 3' termini of virtually all nascent polymerase III transcripts. It is associated with precursor form of RNA polymerase III transcripts including tRNA and 4.5S, 5S, of RNA polymerase III transcripts including tRNA and 4.5S, 5S, of RNA polymerase III transcripts including tRNA and 4.5S, 5S, of RNA polymerase III transcripts including tRNA and 4.5S, 5S, of RNA polymerase III transcripts including tRNA and 4.5S, 5S, of RNA polymerase III transcripts including tRNA and 4.5S, 5S, of RNA polymerase III transcripts including tRNA and 4.5S, 5S, of RNA polymerase III transcripts including tRNA and 4.5S, 5S, of RNA polymerase III transcripts including tRNA and 4.5S, 5S, of RNA polymerase III transcripts including tRNA and 4.5S, 5S, of RNA polymerase III transcripts including tRNA and 4.5S, 5S, of RNA polymerase III transcripts including tRNA and 4.5S, 5S, of RNA polymerase III transcripts including tRNA and 4.5S, 5S, of RNA polymerase III transcripts including tRNA and 4.5S, 5S, of RNA polymerase III transcripts including tRNA and 4.5S, 5S, of RNA polymerase III transcripts including tRNA and 4.5S, 5S, of RNA polymerase III transcripts including tRNA and 4.5S, 5S, of RNA polymerase III transcripts including tRNA and 4.5S, 5S, of RNA polymerase III transcripts including tRNA and 4.5S, 5S, of RNA polymerase III transcripts including tRNA and 4.5S, 5S, of RNA polymerase III transcripts including tRNA and 4.5S, 5S, of RNA polymerase III transcripts including tRNA and 4.5S, 5S, of RNA polymerase III transcripts including tRNA and 4.5S, 5S, of RNA polymerase III transcripts including tRNA and 4.5S, 5S, of RNA polymerase III transcripts including tRNA and 4.5S, 5S, of RNA polymerase III transcripts including tRNA and 4.5S, 5S, of RNA polymerase III transcripts including tRNA and 4.5S, 5S, of RNA polymerase III transcripts including tRNA and 4.5S, 5S, of RNA polymerase III transcripts

    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              seq

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Also required for the repair of mismatches within meiotic heteroduplex DNA and for nucleotide excision repair. SUBUNIT: Heterodimer (By similarity).
SUBCELLULAR LOCATION: Nuclear (Probable).
SIMILARITY: Belongs to the XPF family.
                                                                                                                                                    BACST

                                                                                                                                                                                                                                                                                                                                                                                                                                                PATHWAY: Lignin biosynthesis.
PATHWAY: Phenylpropanoid metabolism; second step.
SIMILARITY: Belongs to the cytochrome P450 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              pollination or UV protection, to numerous pytoalexins synthesized by plants when challenged by pathogens, and to lignins. CATALYTIC ACTIVITY: Trans-cinnamate + NADPH + O(2) = 4-hydroxycinnamate + NADP(+) + H(2)O.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 64

FUNCTIONS in tRNA maturation.
-!- SUBCELLULAR LOCATION: Nuclear (Probable).
-!- SIMILARITY: Contains 1 RNA recognition motif (RRM) domain.
-!- SIMILARITY: TO VERTEBRATE PROTEIN LA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Wood V., Gwilliam R., Rajandream M.A., Lyne M., Lyne R., Stewar
